

## Product Datasheet

<b>Product Name</b>	Placental Alkaline Phosphatase Human Recombinant
<b>Cata No</b>	CB500509
<b>Source</b>	<i>Escherichia Coli.</i>
<b>Synonyms</b>	ALP, PLAP, Alkaline phosphatase placental type, EC 3.1.3.1, PLAP-1, Alkaline phosphatase Regan isozyme.

### Description

Placental alkaline phosphatase (PLAP) is a membrane-associated siaglycoprotein enzyme normally present at high concentration in syncytiotrophoblasts within the placenta during the third trimester of gestation. The expression of PLAP was originally thought to be restricted to term placenta but a human PLAP-like variant has been described which shares more than 85% homology with PLAP itself. PLAP is expressed only in normal term placenta, endocervix and fallopian tube and also in ovarian and proximal gastrointestinal tumors. It is also commonly expressed in germ cell tumors and more recently described in seminomas.

Placental Alkaline Phosphatase Human Recombinant encoding 154-287 amino acids expressed in E.coli.

### Physical Appearance

Sterile filtered liquid.

### Formulation

PLAP at 100µg/ml in 50mM Tris-Acetate, pH7.5, 1mM EDTA and 20% Glycerol.

### Stability

Store vial at -20°C to -80°C. When stored at the recommended temperature, this protein is stable for 12 months.

**Please prevent freeze-thaw cycles.**
